EXPLORING WOMEN’S ATTITUDES AND THE IMPACT OF GENDER-BASED VIOLENCE ON THEIR MENTAL AND PHYSICAL HEALTH

Policy and Programming Brief

A collaborative effort of
- Sri Lanka Medical Association
- National Committee on Women
- World Health Organisation
- International Labour Organisation
- University of Colombo
- Family Planning Association of Sri Lanka
- Oxfam Australia
- Women In Need
- Women and Media Collective
- ACTED

Facilitated by Dr. Nalika Gunawardene
PREFACE:

The report ‘Broadening gender: Why masculinities matter’ – a study on attitudes, practices and gender-based violence in four districts in Sri Lanka – was launched by Care International Sri Lanka under its engaging men project, EMERGE (Empowering Men to Engage and Redefine Gender Equality) in April 2013. The report was developed in collaboration with Partners for Prevention to understand men’s knowledge, practices and social attitudes towards gender and gender-based violence in Colombo, Batticaloa, agrammes, as well as a wealth of information on gendered attitudes, norms, and practices of women and men that can be applied to enhance GBV prevention, health, youth and empowerment interventions. The study has been implemented using the WHO ethical guidelines for research. The research tools were based on the WHO Multi-country Study on Women’s Health and Domestic Violence and the International Men and Gender Equality Survey carried out by Instituto Promundo and the International Centre for Research on Women.

As a means to utilize the data to inform policy and programming enhancements, five thematic working groups which comprised members from the state, health, and NGO sectors and academics were formed to develop recommendations in the following areas:

- Child protection – including childhood experiences and their impact on violence perpetration in collaboration with UNICEF and facilitated by Dr Hiranthi Wijemanne
- Exploring women’s attitudes and the impact of GBV on their mental and physical health – facilitated by Dr Nalika Gunawardena
- Private sector engagement and the role they can play in GBV reduction – facilitated by Prof. Maithree Wickramasinghe
- Youth engagement for reduction of SGBV in collaboration with the Family Planning Association of Sri Lanka and facilitated by Prabu Deepan
- Addressing men’s health as a means of primary prevention of GBV in collaboration with WHO/UNAIDS and facilitated by Dr Dayanath Ranathunga

These papers will be translated into Tamil and Sinhala languages and shared in the four districts with the local government bodies and civil society working in each field in order to help inform their work.

ACKNOWLEDGEMENTS

Care International Sri Lanka gratefully acknowledges the facilitators, Dr Hiranthi Wijemanne, Dr Nalika Gunawardena, Prof Maithree Wickramasinghe, Prabu Deepan and Dr Dayanath Ranathunga and the members from each working group for their commitment and contribution towards developing and finalizing these policy briefs. We would like to thank Saama Rajakaruna for her dedication and hard work in coordinating all five thematic working groups.

Care International Sri Lanka would also like to thank Partners for Prevention, the Royal Norwegian Embassy, UNDP Sri Lanka, UNICEF, The Family Planning Association of Sri Lanka, WHO and UNAIDS for their support in the development, implementation and dissemination of the study and papers.

INTRODUCTION TO THEMATIC AREA IN RELATION TO GBV AND MASCULINITIES

There has been little work done on masculinities, both as a field of inquiry and site of advocacy, in Sri Lanka. To address the gap in evidence-based studies of masculinities, CARE Sri Lanka undertook a study on men’s knowledge, practices and attitudes toward gender and gender-based violence (GBV). Other than the study among men, a smaller scale study was conducted in the same districts to assess women’s attitudes on gender based violence and their experience of different types of violence.

SUMMARY OF KEY FINDINGS RELEVANT TO THEMATIC AREA

WOMEN’S ATTITUDES

- Women in Sri Lanka hold gender inequitable attitudes which are more inequitable than men’s attitudes. This was so particularly for attitudes related to rape. This is evident in the finding that two thirds of the female sample (67%), as opposed to 55% of men affirming that ‘in any rape case, one would have to question whether the victim is promiscuous or has a bad reputation.’

- Women’s attitudes reflected a deeper acceptance than men of social and cultural attitudes that discriminate against women. For example, 58% of women, compared to 41% of men, believed that a woman should tolerate violence in order keep the family together.

- It was also evident that a high proportion of women maintain hegemonic ideals of masculinity. For example, 42% of women (and 25% of men) declared that ‘a real man produces a male child’ while 66% of women (and 58% of men) affirmed that ‘it is manly to defend the honour of your family even by violent means.’

WOMEN’S REPORTS OF VIOLENCE

- The study highlighted that violence against women is prevalent in diverse forms. Magnitude of all forms of violence indicated that intimate partner violence is a significant public health problem in the country.

- There was evidence of underreporting of all forms of violence. Victimization to emotional violence, physical violence, forced sex by partner and non-partner rape were the mostly underreported forms of violence. Women’s underreporting may be due to the stigma attached to sexual violence and the taboo of talking openly about conjugal sexual relations.

HELP SEEKING BEHAVIOUR

- Just 13% of women who experienced intimate partner violence and 8% of women who experienced non-partner sexual violence reported this violence to the police.

- It was found that even among those who sought help, revealing the cause of violence was
poor. Only 32% of female victims of intimate partner violence who sought medical aid reported violence as the reason for seeking assistance. Only 10% of women victims of IPV or non-partner sexual violence told their families about the violence and the trauma they suffered.

**IMPACT OF VIOLENCE ON WOMEN’S HEALTH**

There was evidence that intimate partner violence has had adverse impact on physical, reproductive and psychological health of women.

- Approximately half of all women who experienced physical IPV were injured by their husbands or male partners. Over a quarter of these women had to stay in bed, 16% had to take days off work and 32% had to seek medical attention, because of injuries relating to the physical violence.

- While violence during pregnancy was rare in this sample, women who experienced intimate partner violence were more likely to have ever miscarried than women who did not experienced intimate partner violence.

- Women who were physically or sexually abused by an intimate partner were less likely to use contraception than women who never experienced intimate partner violence.

- Among women who experienced intimate partner violence, 25% ever had suicidal thoughts, compared with only 7% of women who never experienced intimate partner violence.

**RECOMMENDATIONS/STRATEGIES TO IMPROVE WOMEN’S ATTITUDES ON GENDER BASED VIOLENCE AND TO MINIMIZE ITS IMPACT ON THEIR HEALTH**

- Promote gender equitable attitudes among women

- Prevent intimate partner violence and reduce its health impact

- Improve reporting of intimate partner violence by women

- Promote gender equitable attitudes on rape among women and improve reporting of sexual harassment and rape

- Strengthen the inter personal violence prevention efforts through research evidence

Please refer to Annex 1 for the detailed recommendations and strategies to improve women’s attitudes on gender based violence and to minimize its impact on their health.

Please refer to Annex 2 for the prioritized set of recommendations with the proposed plan of action.

A. Gender inequitable attitudes of women

- Deeper acceptance of discrimination of women in the society
- Hegemonic ideals of masculinity

The National Human Resources and Employment Policy for Sri Lanka has pledged to promote gender equality in employment.

National Human Rights Action Plan contains commitments on promoting Anti-Sexual Harassment policies in both private and government sectors.

Ministry of Labour Gender Policy being drafted

A.2 Lobby to make workplace policies more gender equitable. It is recommended that this be done using several approaches:

A.2.1 Make use of existing documents with examples of good workplace policies and practices to promote gender equality in workplaces in Sri Lanka. These documents to be made available to be used as a tool to facilitate the lobbying process.

A.2.2 Lobby with mid-level administrative staff (government and private) highlighting:
- The findings of the study in relation to gender unequal attitudes of men and women and effects of violence on work life
- Evidence to prove that workplaces are a setting to promote gender equality and how it will improve productivity in the workplace
- Documented evidence of good workplace policies and practices to promote gender equality in workplaces in Sri Lanka

A.2.3 Lobby with University authorities to implement a core curriculum on gender equality and promoting gender equality in workplace for undergraduates.

Gender equitable work environments can encourage gender equitable attitudes in working women.

### Risks

- Less priority to this issue by administrators in lobbying for policy changes
- Policy processes taking a long time

### Mitigation strategies

Point out the policy/legal commitments

Use research findings to convince the officials on the adverse effects to work productivity

---

**National**

- Ministries of
  - Women's affairs

Awareness raising activities which contain messages that are thought-provoking and that appeal to logic are likely to lead to permanent changes in attitudes.

Conducting face to face sessions targeting different groups trans: It is recommended that an education tool (a short video clip, leaflet) be developed to complement the face to face session.

The following are suggested as target groups:

• Women's organizations at national, local and village levels
• Women Parliamentarians Caucus
• Employees in Garment industries
• Well Women clinic attendees
• Antenatal clinic attendees
• Village 'Suwasahana' committees
• Village level women's societies
• Village level action groups of NGOs
• Youth groups
• Girl Guides Association of Sri Lanka

None

National and local

A.3 Conduct awareness raising activities to promote gender equitable attitudes among women

Following are suggested as the content:

• the findings of the study in relation to attitudes of women
• harmful effects of gender inequitable attitudes of women
• importance of gender equality in maximizing productive personal, family and societal relationships
• important role played by women as a mother in creating gender attitudes of children
• what women can do at home and at workplace and in society to change the attitudes to be more gender equitable

It is recommended that this be done using several approaches:

A.3.1 Conducting face to face sessions targeting different groups. It is recommended that an education tool (a short video clip, leaflet) be developed to complement the face to face session.

The following are suggested as target groups:

• Women's organizations at national, local and village levels
• Women Parliamentarians Caucus
• Employees in Garment industries
• Well Women clinic attendees
• Antenatal clinic attendees
• Village 'Suwasahana' committees
• Village level women's societies
• Village level action groups of NGOs
• Youth groups
• Girl Guides Association of Sri Lanka

• Ministries of
  ■ Mass media and communication
  ■ Women's affairs
  ■ youth affairs and skill development
  ■ Local Government & Provincial Councils
  ■ Youth Corps and Clubs of Youth Federation
  • National Youth Services Council
  • Ministry of Women's affairs
  • Bureau for the Prevention of Abuse of Children & Women
  • Women's Bureau of Sri Lanka
  • National Committee on Women
  • Family Health Bureau, Ministry of Health
  • SLMA
  • College of Gyn and Obs
  • Expert Committee on Women's

Risks
Changing attitudes through awareness raising activities will be influenced by societal factors that influence gender inequality.

Conduct of awareness raising activities on this theme may be opposed by extreme groups in operation in the country.

Mitigation strategies
The content of the awareness activities to be planned carefully to match the cultural context.

Identify an accepted local figure as the ambassador in the awareness raising activities.

Local research evidence to be utilized.

Real life stories to be related by the affected.

Encourage the extreme groups to come on board as partners in implementing these activities.
### A. Gender inequitable attitudes of women

| None | A.4 Lobby with media to prevent gender inequitable messages being disseminated through mass media and promote the mass media to disseminate new notions of masculinity associated with non-violence, respect and equality |
| National | A.3.2 Publish articles on popular women’s tabloid papers |
| National and Local | A.3.3 Conduct chat sessions in popular TV shows aimed at homemakers. |
| Specific to locality | A.3.4 Conduct chat session on popular programmes of radio channels at national/local aimed at homemakers/youth |
| | A.3.5 Use innovative approaches—street dramas to be displayed at public events |

It is recommended that this be done using several approaches:

- **A.4.1 Commission a group to analyse the popular tele-dramas/news items/newspaper stories to identify instances in which material portray gender inequality and instances which can be modified to promote gender equality. A document be done highlighting these instances and how they can be modified to promote gender inequality. This document should facilitate the lobbying process.**

  **This recommendation has been prioritized and plans to initiate action are indicated in Annex 2.**

- **A.4.2 Offer training to tele-drama producers, television chat show presenters, radio programme presenters, writers on how they can promote gender equality in their work**

- **A.4.3 Encourage tele-drama producers, television chat show presenters, health SLMA**

  - **Forum against GBV**

Positive conditioning of attitudes of children can be achieved by positive images of parents. A.4.4 Sensitization of heads of media institutions, editors and senior media personnel to lead the messaging that gender insensitive reporting and portrayal will not be accepted.

A.5 Lobby to make parent crafting with gender equitable parenting practices as an essential in programme that reach all parents in the country.

Following are suggested as the content:
- Importance of inculcating gender equitable attitudes in childhood and the benefits of it to the personal lives of the children as adults.
- Important role played by parents in creating gender attitudes of children.
- What parents can do to inculcate gender equitable attitudes among their children.

It is recommended that this be done using several approaches:

A.5.1 Lobby to include the above content in the present parenting session implemented by the Ministry of Health for newly married couples.

A.5.2 Lobby to include a session on the above content in the present ‘couple sessions’ implemented by the Ministry of Health for pregnant mothers and the spouses.

A.5.3 Incorporate follow up and monitoring component into these programmes.

A.5.4 Encourage NGOs to conduct parenting programmes at village levels.

A.5.5 Lobby with Church administrators to include the above content in their existing counselling sessions for the couples who are getting married.
### Positive conditioning of attitudes of students can be achieved by positive images of teachers.

- **National**
  - Ministries of
    - Education
    - Health
  - National Institute of Education
  - National Education Commission
  - Women’s Bureau of Sri Lanka
  - National Committee on Women
  - Family Health Bureau, Ministry of Health
  - NGOs working towards promoting Women’s Health

### Lack of knowledge on mechanisms of implementations

**Mitigation strategies**

Use successful case studies from other developing countries to convince the need to promote gender equitable practices in schools.

### Misconceptions related to promoting sexual practices in schools through CSE

**Mitigation strategies**

Offer skills training sessions to teachers and also offer services of a team of trained facilita-
### B. Prevent IPV and reduce its health impacts

#### B.1 Identify existing groups and support potential groups to be vigilant of domestic violence incidents in the communities and encourage such groups in other areas

- Convention on the Elimination of All Forms of Discrimination against Women (CEDAW)
- Convention on Preventing and Combating Trafficking in Women and Children for Prostitution Act No. 30 of 2005
- Prevention of Domestic Violence Act

This recommendation has been prioritized and plans to initiate action are indicated in Annex 2.

#### B.2 Integrate anti-GBV messages into on-going health behaviour change communication campaigns

The training of Medical Officers (Mental Health) include services to GBV victims

Cadre positions for counsellors have been approved for the Ministry of Health

#### B.3 Lobby to enhance the mental health services to address the needs of victims of GBV. Following are some

### Evidence from other countries suggests that community vigilant groups are effective in preventing physical violence events at domestic level.

Prompt and appropriate mental health interventions can prevent major psychological manifestations.

### National and local and provincial Councils

#### Local

- Ministries of Health
- Women’s Affairs
- Local Government & Provincial Councils
- Sri Lanka Police
- Bureau for the Prevention of Abuse of Children & Women
- Women’s Bureau of Sri Lanka
- National Committee on Women
- Dept. of Social Services
- Family Health Bureau, Ministry of Health

### Risks

- Skepticism of the ‘cultural’ appropriateness of this strategy
- Issues related to safety of the interventionists

### Mitigation strategies

- Use successful case studies from other developing countries

- Conduct pilot projects and generate evidence of success/failure

### National

- Ministries of Health
- Women’s Affairs
- National Committee on Women
- Dept. of Social Services

### Do-

- Scarcity of mental health services

### Local

- Ministries of Health
- Women’s Affairs
- Local Government & Provincial Councils
- Sri Lanka Police
- Bureau for the Prevention of Abuse of Children & Women
- Women’s Bureau of Sri Lanka
- National Committee on Women
- Dept. of Social Services
- Family Health Bureau, Ministry of Health

### Risks

- Current focus on lifestyle might get distracted

### Mitigation strategies

- Pilot testing of the messages
Better reporting leads to accurate estimation of the magnitude of the problem enabling better planning of the preventive strategies. Reporting will ease the mental stress of the victim.

### C. Improve reporting of IPV by women

<table>

</tbody>
</table>

### C. Evidence of underreporting of intimate partner violence by women

<table>
<thead>
<tr>
<th>Potential points that need emphasizing:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Increase the number of MO (Mental Health) cadre in all districts of the country</td>
</tr>
<tr>
<td>• Utilize the approved cadre of counsellors effectively to provide the services throughout the country while ensuring the quality of counselling services provided through an effective monitoring mechanism</td>
</tr>
<tr>
<td>• Instate a system of referral of GBV victims for compulsory counseling</td>
</tr>
<tr>
<td>• Provide a basic training on counseling for selected health workers</td>
</tr>
</tbody>
</table>

### Mitigation strategies

- Conduct training programmes on responding to reports of GBV victimization to the staff of reporting agencies
- Networking with state and non-state and NGO sector for services
- Re-victimization of the reporting victims at the reporting agency
- Issues related to safety of the reporting victims
- Maintaining services for the victims

### Risks

- Conduct training programmes on responding to reports of GBV victimization to the staff of reporting agencies
- Networking with state and non-state and NGO sector for services
Health services are utilized by women at some point of their lives and there is evidence that health settings are effective in promoting women to report violence.

National

- Ministries of Health
- Bureau for the Prevention of Abuse of Children & Women
- Women’s Bureau of Sri Lanka
- National Committee on Women
- Family Health Bureau, Ministry of Health
- SLMA
- College of Gyn and Obs
- Expert Committee on Women’s health SLMA
- Forum against GBV
- UN agencies

- Ministries of Health

C. Evidence of underreporting of intimate partner violence by women

C.2 Lobby to improve health sector to detect women victims among the clients and encourage women who seek care to report violence

It is recommended that this be done using several approaches:

C.2.1 Lobby to improve the sensitivity of the health care workers spectrum of effects of gender-based violence on health and build their capacity to detect/screen for victims among their clients and refer them to relevant services. It is recommended that basic training of public health staff, nursing officers and other health categories and undergraduate curriculum of medical students to contain inputs on:

- How gender can affect health and health seeking behaviour
- Research evidence on the magnitude of IPV and underreporting by women
- The health impacts of under-reporting
- How health care sector can act as an effective setting to intervene in IPV
- The role of health workers in encouraging reporting and linking the victims to services

- How the availability of safe houses for immediate protection
- The provisions through Prevention of Domestic Violence Act and how to access these services

It is recommended that public awareness activities be done using several approaches:

- Conduct face to face sessions targeting different women’s groups - homemaker, working women (state sector, private sector, plantation sector)
- Publish articles on newspapers and on popular women’s tabloid papers
- Television and radio programmes
- Use innovative approaches - street dramas in public places
<table>

There is evidence that existing services for women who report IPV have shortcomings and that they have an influence on rates of reporting.

### C. Evidence of underreporting of intimate partner violence by women

#### C.4 Lobby to improve existing services for women who report IPV

It is recommended that this be done using several approaches:

- **C.4.1.** Lobby for a coordinated system to maximize the efficient provision of services available through different sectors to the victims who report violence.
  - Organize a seminar of high level officials of all the major sectors involved in responding to the issue of IPV (health, education, women’s affairs, social services, police department etc.) and other key stakeholders involved in addressing the problem to discuss the available services and to draw up a coordinated system to maximize the efficient provision of services available through different sectors.

- **C.4.2.** Lobby to strengthen the services of ‘Mithurupiyasa’ in health institutes by providing services of counsellors.

- **C.4.3.** Lobby to improve the operation of Women’s Desk services at police stations by providing them with basic amenities such as dedicated telephone lines and a transport service and by improving their capacity to assist women.

- **C.4.4.** Improve the capacities of the Mediation Boards to deal with these issues.

- **C.4.5.** Lobby to improve gaps in implementing provisions offered through the Prevention of Domestic Violence Act-
  - misinterpretation of the requirements to issue a protection order by the judges
  - gaps in the counselling services
  - gaps in the services to monitor the implementation of the protection order
  - the dearth of availability of safe houses
  - counter attitudes that women should give up personal security in favour of upholding the family unit and PDVA promoting divorces is a threat to integrity of families in the country.

- **C.4.6.** Lobby to set up support services and the role of law enforcers in implementing PDVA.

</table>

**Risks**

- Lack of resources
- Lack of coordination among service providers
- Poor acceptance of NGOs as the service providers by the state sector

**Mitigation strategies**

- Develop a data base on existing resources
- Develop a mechanism to coordinate the services by different agencies

- **C.4.6.** Lobby to set up support services and the role of law enforcers in implementing PDVA.
Awareness raising activities which contain messages that are thought-provoking and that appeal to logic are likely to lead to permanent changes in attitudes. Better reporting leads to accurate estimation of the magnitude of the problem enabling better planning of the preventive strategies. Reporting will ease the mental stress of the victim.

### D. Promote gender equitable attitudes on rape among women and promote reporting of sexual harassment and rape

#### D.1 Conduct public awareness activities to promote gender equitable attitudes among women on rape, to inform the public on laws on rape and sexual harassment and to promote reporting of rape and sexual harassment

The content should include:

- The specific acts that constitute sexual harassment and rape in a court of law
- The fact that law does not take into account the profile of the victim (dress, behavioural codes, past sexual history etc.) when defining rape
- The concept of marital rape
- The mechanisms to report sexual harassment and rape
  - a. the dedicated hotline 1938 to inform authorities of incidents of violence against women
  - b. the women’s desk at police station

It is recommended that this be done using several Approaches:

- D1.1 Conduct face to face sessions targeting different groups such as homemakers, working women (state sector, private sector, plantation sector)
- D1.2 Publish articles on newspapers and on popular women’s tabloid papers
- D1.3 Television and radio programmes insist on mandatory reporting of the laws when reporting rape in media
- D2 Lobby to extend criminal law to recognize marital rape as an offense

### C.4.7 Lobby to strengthen all services, psychological, medical, legal assistance, housing assistance, job and skills training, and streamline the process by which victims can access them without having to go to numerous separate locations.

### C.4.8 Formalize the referral system and medico-legal support in the healthcare system.
GBV has been identified as a research priority by the Ministry of Health and National Health Research Council.

<table>
<thead>
<tr>
<th>E. Strengthen the IPV prevention efforts through research evidence</th>
</tr>
</thead>
<tbody>
<tr>
<td>E.1 Further analyses of the data of this research to highlight-</td>
</tr>
<tr>
<td>■ Health impact of the women</td>
</tr>
<tr>
<td>■ Risk factor for women to be a victim of IPV</td>
</tr>
<tr>
<td>E.2 Other recommended research-</td>
</tr>
<tr>
<td>■ the reasons for women to underreport IPV</td>
</tr>
<tr>
<td>■ pathways through which women seek help</td>
</tr>
<tr>
<td>■ Research how PDVA has impacted positively on women’s wellbeing as well as on children</td>
</tr>
<tr>
<td>■ Effect of SGBV on children: link this study with the upcoming country report on Child Rights Convention and the government obligation to report on it</td>
</tr>
<tr>
<td>■ Research by multidiscipline teams</td>
</tr>
</tbody>
</table>

Research evidence is useful to scientifically justify the actions in the process of lobbying for interventions.
